DigiPlus IT

Software Engineer Intern (Intern + PPO Track)

Role	Software Engineer Intern
Track	6-month internship with Pre-Placement Offer (PPO) based on performance
Location	Mumbai, Maharashtra (on-site)
Eligibility	Final-year B.E. / B.Tech (CS, IT, or related), Class of 2027
Stipend & CTC	12k – 15k Per Month Stipend and 5-6 LPA

About DigiPlus IT

DigiPlus builds modern digital products and AI-powered applications for clients across industries. We are a hands-on engineering team that cares about clean architecture, thoughtful design, and shipping software that works in production. We hire a small number of exceptional campus engineers each year and invest heavily in their growth.

The Opportunity

You will join a live product team from day one and work across the full stack, covering frontend, backend, cloud infrastructure, and AI application development, with a dedicated mentor. Interns who demonstrate strong ownership and technical depth receive a Pre-Placement Offer to join DigiPlus full-time.

What You Will Work On

- Build AI-powered application features such as LLM integrations, agent workflows, and retrieval pipelines.
- Develop backend services in Node.js with well-designed APIs, following solid architecture and design principles.
- Build responsive frontends in React and Tailwind CSS, translating UI/UX designs into clean component architecture.
- Contribute to DevOps and AIOps practices including CI/CD pipelines, containerization, monitoring, and automated operations.
- Participate in architecture discussions, design reviews, and code reviews; ship code that goes to real users.

Core Skills We Look For

Strong CS fundamentals: data structures, algorithms, OOP, and good design principles (SOLID, separation of concerns).

Backend

- JavaScript/TypeScript fundamentals: event loop, async/await, promises, and error handling.
- REST APIs with Express or NestJS: routing, middleware, validation, and auth basics (JWT, OAuth concepts).

- Databases from Node: SQL and NoSQL with an ORM (Prisma, Sequelize, or Mongoose), plus testing with Jest.

Frontend

- React fundamentals: components, hooks, and state management
- Building frontend architecture from UI/UX designs: component hierarchy, reusable components, responsive Tailwind layouts.

DevOps & AIOps

- Linux, shell scripting, and Git workflows: branching, pull requests, code review.
- Docker and CI/CD pipelines (GitHub Actions or Jenkins); cloud basics on AWS, Azure, or GCP.
- Monitoring and observability: Tools for logs, metrics, alerts;

AI Application Development

- Hands-on projects with LLM APIs: chatbots, RAG, or agents, with a working understanding of prompt design, embeddings, and vector databases.

Internship & PPO Details

Duration: 6 months, full-time, on-site in Mumbai, with a dedicated mentor and a structured learning plan.

Evaluation: performance reviewed at the 3-month and 6-month marks against clear, shared criteria.

PPO: high performers receive a full-time offer as Associate Software Engineer before the internship ends.

Selection Process

1. Online application and resume shortlisting.
2. Assessment covering coding and problem solving.
3. Round 1: technical interview on fundamentals, projects, and a hands-on exercise.
4. Round 2: technical deep dive on architecture, DevOps, AI, and system thinking.
5. HR discussion and offer.

How to Apply

Apply through your campus placement cell, or email your resume and GitHub/portfolio links to careers@digiplusit.com with the subject line “Campus Intern 2027 | Your Name | College”.
